Use Case CF_ External sound when a vehicle is moving in reverse.docx: Do not match

Description: The development requirement does not fully comply with the certification regulations. The development requirement specifies that the AVAS sound starts when the vehicle is in reverse drive mode and moving at any speed, while the certification regulations specify that the AVAS is only required to operate in the speed range of greater than 0 km/h up to and inclusive 20 km/h. Additionally, the certification regulations prohibit a pause function, while the development requirement does not mention this.
