Use Case CF_ Engaging the Parking Brake.docx: Do not match

Description: The development requirement does not fully comply with the certification regulations. The certification regulations specify requirements for Brake Assist Systems (BAS) in passenger cars, including functional requirements, test procedures, and approval processes. The development requirement describes a use case for engaging the parking brake, which is not directly related to the BAS requirements in the certification regulations.

Use Case CF_ Parking brake malfunction.docx: Do not match

Description: The development requirement does not match the certification regulation. The development requirement is for a parking brake malfunction use case, while the certification regulation is for Brake Assist Systems (BAS) in passenger cars. The certification regulation does not cover the specific use case described in the development requirement.
